e. Financial & Escrow Manager.....	20
f. Dispute Resolution Center.....	20
g. Helpdesk.....	20
h. Benefits & Rewards Configuration.....	20
i. Notifications Engine.....	20

The platform currently will have 4 actors that will interact and require their own features and functionalities These are:

- Contractors/Project Developers
- Service Providers
- Administrators/Superusers
- Client/End-user

Mock-up

<https://ricardo-phoenixenergy.github.io/phoenix-one/>

Contractors/Developers

1. Overview

- a. Contractors (EPCs, Project Developers) are the primary drivers of the ecosystem. They use the platform as a centralised, end-to-end Operating System for their business.
- b. Value Proposition:
 - i. **Standardisation:** Developing projects to a verified "Gold Standard" using strict Milestone Governance.
 - ii. **Marketplace Access:** A unified portal to procure Services (Engineering/Legal) and Hardware (PV/BESS) with integrated logistics.
 - iii. **Lifecycle Management:** Seamless transition from Development to Construction to O&M.
- c. **Incentive Model:** A circular economy where active usage (purchasing services/hardware) and portfolio performance (energy generation) unlock financial rebates and equipment discounts.

2. Core Modules & Actions

a. Unified Contractor Dashboard

The "Morning Coffee" screen. It aggregates business health, project progress, and plant operations.

Key Features:

- i. **Business Statistics:**

1. **Pipeline:** Total Projects vs. Active Projects vs. Completed.
 2. **Financials:** Revenue in Escrow (Pending Jobs), Rewards Balance.
 3. **Portfolio Size:** Total Installed Capacity (MW) and Storage (MWh).
 4. **Nice to haves:**
 - a. Contractor can generate an automated Portfolio/Company Overview that can be branded and shared with clients.
- ii. **Upcoming Calendar Events** (Scheduled Maintenance, Client Meeting, Site Visit, etc.)
 - iii. **Plant notifications:**
 1. **Operational:** "Site X is underperforming by 15% vs. expected irradiance."
 2. **Prescriptive:** "Bad weather forecast for Site Y tomorrow >> Alert sent to Client to preserve battery."
 3. **Maintenance:** "Inverter error 404 at Site Z >> Schedule technician."
 - iv. **AI Suggestions:**
 1. No maintenance scheduled but plant performance is bad -> Schedule a maintenance
 2. Bad Weather tomorrow -> Preserve Batteries
 - v. **Milestone Watch:**
 1. "EIA Report for Project Alpha was Rejected. View Feedback."
 2. "Structural Assessment for Project Beta was Completed by Service Provider."
 - vi. **Company Profile Generator:** One-click generation of a branded PDF "Portfolio Overview" (Aggregating all completed projects, total carbon saved, etc.) for pitching to new clients.

b. Project Management System

The core workflow engine.

Views:

- **Projects Grid:** Filterable card view (Stage, Location, Capacity).

- **Individual Project Workspace:** Project directory all project information and artefacts.

i. **Project Grid**

Project Card Information should include:

1. **Project Name**
2. **Client Name**
3. **Location (High level - Johannesburg, South Africa)**
4. **Project Type (Solar, Wind, etc)**
5. **Capacity (Generation + Storage Capacity)**
6. **Project Stage (Progress)**
7. **Last Updated (e.g., 1 Week Ago)**

ii. **Project Initialization (Creating a Project)**

To ensure compliance and governance, projects are not created as "blank slates." They are instantiated via a setup wizard that determines their workflow.

Key Steps:

1. **The Intake Form:** The user clicks "New Project" and captures the defining parameters:
 - a. **Client & Site:** Who is it for, and where is it located?
 - b. **Technical Classification:** Technology (Solar/Wind), Grid Connection Status, and System Size.
 - c. **Commercial Deal:** Outright Purchase, PPA, or Lease.
2. **The Logic Engine (Backend):**
 - a. The system analyzes the inputs against the Admin Milestone Templates.
 - b. **Example:** If "System Size > 1MW" AND "Deal = PPA," the system identifies the "Complex Commercial PPA" template.
3. **Instantiation:**
 - a. The system generates the project, automatically populating Tab B (Milestones) with the correct governance workflow for that specific deal type.

iii. **Individual Project Workspace**

Triggered when selecting a project from the Grid or after creating a new project.

1. **Tab A: Overview & Configuration**

The Overview is the minimum input data required by the user to create a project. An important section that form part of this which will be captured when a user creates a project are as follows:

- a. **Deal Structure**
- b. **Client Information**
- c. **Site Information**
- d. **Client Needs & Motivations**

2. **Tab B: Milestones**

The Milestones tab acts as the platform's central nervous system for project governance. It dictates the rigorous "Gold Standard" workflow, ensuring that every project moves through a verified lifecycle from development to commissioning. This section is not merely a checklist; it is a compliance engine that validates the integrity of the asset.

Key features of milestones:

- a. **Dynamic Template Logic:** Projects vary significantly based on jurisdiction, technology, and deal structure. The Milestone workflow is therefore not static but dynamically generated based on the project's parameters.
 - i. **Smart Configuration:** Admins configure milestone templates in the backend. When a Contractor initiates a project, the system selects the correct workflow based on:
 - 1. Project Type (e.g., Solar PV vs. Wind).
 - 2. System Size (e.g., <1MW vs. >100MW Grid Scale).
 - 3. Deal Structure (e.g., PPA vs. Outright Purchase).
 - ii. **Compliance Alignment:** These workflows are designed to mirror the strict sign-off requirements of financing institutions and

regulatory bodies (e.g., Eskom, Banks), ensuring the project is "Bankable" by design.

- b. **Submission & Artefact Governance:** Each milestone acts as a "Hard Gate." To proceed, the Contractor must satisfy specific data requirements.
 - i. **Mandatory Submissions:** Business rules define required artefacts for each stage (e.g., Electricity Bills, EIA Reports, Structural Engineering Assessments, Datasheets). The user cannot progress to the next stage until these are uploaded.
 - ii. **Optional Supporting Documents:** Users can upload supplementary files (notes, internal memos) that are not strictly required. These provide flexibility for the user's own data management but do not trigger a validation event.
- c. **The "Get Service" Bridge (Marketplace Integration):** Recognising that Contractors may not have the internal capacity for every milestone, the system integrates directly with the Service Center.
 - i. **Integrated Procurement:** If a user encounters a milestone they cannot fulfill internally (e.g., "Structural Assessment"), a "Get Service" button is available.
 - ii. **Seamless RFQ:** Clicking this creates a pre-filled RFQ in the Service Center, linked specifically to that milestone. Once the Service Provider completes the job, the deliverable is automatically pulled back into the Milestone as a submission.
- d. **Validation & Version Control Cycle:** To ensure accountability and traceability, the submission system is built on a rigorous review loop.
 - i. **Vetting & Approval:** Every mandatory submission enters a queue for Admin (or Delegate) review.
 - ii. **Feedback Loops (Rejection):** If a submission is rejected, the Admin provides specific feedback notes explaining the deficiency (e.g.,

"Missing Engineer's Stamp"). The milestone status changes to "Action Required."

- iii. **Version Control:** The system tracks every iteration of a file. This creates an immutable audit trail showing who submitted the document, when it was submitted, and which version was finally approved.
 - iv. **Status Visibility:** Users have a clear view of submission metadata: Submission Status, Date Uploaded, and Approval Date.
- e. **The Output: "Gold Standard" Certificate** The ultimate goal of the milestone workflow is the generation of the Project Certificate.
- i. **Automated Issuance:** When a project is fully commissioned and all milestones are validated, the system generates a Certificate of Compliance.
 - ii. **Strategic Value (The Moat):** This certificate acts as a "Digital Passport" for the project, proving it was developed with the highest degree of due diligence and integrity.
 - iii. **Institutional Lock-in:** As we develop partnerships with banks and insurers, this Certificate will become a mandatory requirement for releasing funding or finalizing insurance policies, effectively locking users into the platform's compliance workflow.

3. **Tab C: O&M & Monitoring (Post-Commissioning)**

Unlocks only when Project Stage = Operational.

Key features:

- a. **Data Normalisation:** A brand-agnostic dashboard converting raw data (WEG/Victron/SunSynk/Deye) into standardised metrics (SoC %, Production kWh).
- b. **O&M Scheduler:**
 - i. Users should be able to create O&M Events linked to Calendars which can be shareable via email to clients. The O&M events should allow for attachments (e.g., reports, invoices)

- ii. **Client Verification:** When marked "Complete," an email is sent to the Client. The Client clicks "Confirm," which updates the status to Verified (Building a trusted track record).
- iii. **O&M History:** A table showcasing all past completed O&M for auditing and track record.

4. **Tab D: Activity Feed**

Most projects would typically have multiple users who work on the project. The Activity Feed traces the actions made by users on the project and can also serve as a Project Discussion. Instead of sharing emails between parties, it can be discussed within the project consolidating communication between participants.

Key features:

- a. **Audit Trail:** "User X uploaded Document Y."
- b. **Contextual Chat:** Project-specific discussions to replace email threads.

5. **Tab E: Team**

These are the users assigned to the project, each user should have varying permissions and roles to view and action certain data regarding a project.

Key features:

- a. **Internal Team:** Assign employees to the project (Read/Write access).
- b. **External Guests:** View Service Providers who currently have temporary access via active Job Cards.

c. **Service Center/Job Cards**

The interface for procuring human services.

Key features:

- i. **RFQ Creator:**
 - 1. **Source:** Can be created stand-alone or triggered from a Project Milestone.
 - 2. **Fields:** Scope, Budget, Timeline, Location.
- ii. **Bid Management:**

1. View received bids (Price, Provider Rating).
2. **Escrow Trigger:** Accepting a bid redirects to the Payment Gateway to fund the Escrow (Security for the Provider).
- iii. **Active Jobs: Monitor progress of hired Service Providers.**
- iv. **Switch Role:** (As defined previously) A toggle to switch to "Service Provider Mode" if this Contractor wants to sell services to others.

d. Hardware Marketplace

A B2B e-commerce module for procuring physical equipment.

Key features:

- i. **Product Catalog:**
 1. Searchable DB of Inverters, Panels, Batteries, and Mounting structures.
 2. Dynamic Pricing: Prices displayed reflect the Contractor's Reward Tier (e.g., Gold Tier sees 7.5% off).
- ii. **Bill of Materials (BOM) Builder:**
 1. Contractors can build a "Shopping List" linked to a specific Project.
- iii. **Logistics Integration:**
 1. Checkout includes delivery scheduling.
 2. Tracking updates pushed to the Project Activity Feed.
- iv. **Strategic Partnerships:**
 1. Primary focus on WEG products (as per incentives), but supports multi-brand listings.

e. Revenue Model

- i. **SaaS Subscription:**
 1. Free for the "Development" phase.
 2. **Paid Per Plant:** Annual license fee per project once "Operational" (contractors can pass this cost to End-Client via O&M fees).
- ii. **Service Fees:** Platform commission on Service Providers hired (deducted from Provider, but effectively a cost of doing business).

- iii. **Hardware Sales:** Platform markup on equipment sales (less discounts).

f. Wallet & Rewards

The ledger for Incentives and Payments.

i. Transactional Wallet

1. **Funds In:** Load funds for Escrow (Paying Service Providers).
2. **Funds Out:** Withdraw earnings (if also acting as a Service Provider).

ii. Discovery Rewards System

A gamified tier system to lock-in loyalty.

1. Point Source 1: Service Rebates

- a. **Logic:** Spend R10,000 on Legal Services and Earn R100 (1%) in Platform Credits.
- b. **Usage:** Credits can be used to pay for future Services or Hardware shipping.

2. Point Source 2: Energy Deployment Tiers (The "Gold Status")

- a. To incentivise contractors for migrating renewable energy projects to the platform as well as add new projects. They can earn points for the total annual energy deployed of their portfolio.
 - i. **Energy deployed > Energy generated** to allow for Battery Only solutions where energy is strategically used but not generated.
 - ii. **Annual deployment:** Because systems will degrade and decommission overtime, or projects could be acquired and transferred to other developers etc.

- b. This will be audited by inverters logging information. However, because of some projects

c. Rewards Tiers:

- i. Bronze (example):

1. Requirement: Energy Deployment < 150 GWh Annual

- 2. WEG Product Discount: 1.5%
 - 3. Service Center Rewards: 1.5% Cashback
 - ii. Silver (example):
 - 1. Requirement: Energy Deployment > 150 GWh and < 400 GWh
 - 2. WEG Product Discount: 4%
 - 3. Service Center Rewards: 4% Cashback
 - 4. Conference & Event Access
 - iii. Gold (example):
 - 1. Requirement: Energy Deployment > 400 GWh and < 1,600 GWh
 - 2. WEG Product Discount: 7.5%
 - iv. Service Center Rewards: 7.5% Cashback
 - v. Conference & Event Access
- d. Platinum (example):
 - i. Requirement: Energy Deployment > 1,600 GWh
 - ii. WEG Product Discount: 10%
 - iii. Service Center Rewards: 10% Cashback
 - iv. Conference & Event VIP Access

Service Providers

1. Overview

- a. Service Providers are specialised professionals or companies offering niche services required during the Project Development and Operations lifecycle.
- b. **Hybrid Roles:** Service Providers can be standalone entities (e.g., a Law Firm) or Contractors who have extra capacity and offer specific services (e.g., an EPC offering Structural Engineering).
- c. Examples of Service Categories include:
 - i. **Fabrication & Mounting:** Steel structures, carports, ground mounts.

- ii. **Professional Services:** Civil/Structural Engineers, Electrical Engineers (PR Eng sign-offs).
 - iii. **Financial & Legal:** Financial Modelling (PPA/Lease feasibility), Contract drafting/review.
 - iv. **Logistics & Plant Hire:** Cranes, transport, specialized tooling.
- d. **Vetting Standard:** Providers undergo a "Verified Pro" check, submitting company registration, professional accreditations (e.g., ECSA registration), and insurance liability covers.

2. Core Modules & Actions

a. Role Switching

- i. Since a user can be both a Contractor (Buyer) and a Service Provider (Seller), the navigation bar must feature a "Switch to Service Provider View" toggle.
- ii. Switching views changes the Dashboard context entirely without requiring a logout/login.

b. Profile & Service Configuration

- i. **Service Catalog:** Providers configure their "Menu":
 - 1. Service Type (Tags).
 - 2. Service Area (Geographic radius).
- ii. **Compliance Vault:** A dedicated section for managing expiring documents.
- iii. **Feature:** Automated reminders when Insurance or Accreditations are about to expire.
- iv. **Public Bio:** The "Storefront" that Contractors see when evaluating a bid (Reviews, Past Jobs, Portfolio Gallery).

c. Opportunity Board (Finding Work)

- i. **RFQ Feed:** A filterable list of open RFQs matching the Provider's service tags
- ii. **Bidding Engine:**
 - 1. **Submit Proposal:** Input price, estimated timeline, and attach a formal quote/proposal document.
 - 2. **Q&A:** A public or private question feature to clarify scope with the Contractor before bidding.

d. Job Cards Dashboard

Management of won bids and active tasks.

- i. **Kanban/List View:** Organized by status:
 1. Bids Submitted (Awaiting Contractor decision).
 2. Active/In-Progress (Work underway).
 3. Pending Review (Deliverables submitted, waiting for sign-off).
 4. Completed & Paid.
- ii. **Stats Overview:** Revenue Earned, Win Rate (Bids vs. Won), and On-Time Performance.

e. Individual Job Card

Individual Job Cards will show the scope of works required and deliverables. It will also create and establish the Project link which the Contractor will give certain permissions for the Service Provider to view certain details regarding the project.

Key features:

- i. **Project-Service Link (Granular Access):**
 1. The Provider gains temporary access to the specific Project.
 2. **Least Privilege Principle:** The Provider only sees data relevant to them (e.g., A Structural Engineer sees Site Plans and Soil Reports, but not the Client's financial PPA data).
- ii. **Deliverable Management:**
 1. **Submission Portal:** Upload area for final reports, drawings, or certificates.
 2. **Version Control:** Handling revisions if the Contractor requests changes.
- iii. **Contextual Chat:** A messenger thread linked specifically to this Job Card (kept separate from general project chat to protect Client privacy).

f. Mechanism: RFQ to Job Card Conversion

The transition from a negotiation (RFQ) to an active contract (Job Card) follows a strict "Fund-then-Work" logic to ensure platform integrity.

- i. **Bid Acceptance & Escrow Lock:**

1. Upon accepting a Service Provider's bid, the Contractor is immediately prompted to fund the Escrow Account matching the bid value.
2. The Job Card is only instantiated once the transaction is successful. This prevents "hollow" contracts where Providers work without guaranteed payment.

ii. **Data Inheritance (The Merge):**

1. The system automatically generates the Job Card by merging the RFQ Scope (Contractor's requirements) with the Winning Bid's Variables (Price, Milestones, Delivery Date).
2. This prevents data re-entry errors and ensures the "Contract" reflects exactly what was agreed upon.

iii. **Dynamic Permission Injection:**

1. **Auto-Provisioning:** The Service Provider is automatically added to the Contractor's Project Team.
2. **Role Restriction:** Their role is strictly limited to the "Service Context"—they can view the specific Milestones and Documents linked to the Job Card, but are blocked from sensitive Commercial/Client data (e.g., Client PPA rates).
3. **Revocation:** Once the Job Card is marked Complete and funds are released, this access is automatically revoked.

g. Revenue Model

- i. **Commission:** The platform deducts a % fee (Service Fee) from the payout amount before it hits the Service Provider's wallet.

h. Wallet & Rewards

i. **Escrow & Milestones:**

1. **Milestone Setup:** On acceptance, the Provider defines payment milestones (e.g., "50% Deposit", "50% on Final Report").
2. **Release Logic:** Funds are held in Platform Escrow. When the Contractor clicks "Approve" on a deliverable, funds move instantly to the Service Provider's Wallet.

ii. **Dispute Resolution:**

1. **"Raise Dispute" Button:** If a Contractor refuses to sign off on valid work, the Provider can escalate to Platform Admins. This freezes the Escrow funds until resolved.

iii. **Auto-Invoicing:**

1. The system automatically generates a Tax Invoice on behalf of the Service Provider once funds are released (ensuring tax compliance).
2. **Withdrawals:** Payout mechanism to the Provider's real-world bank account.

Clients/End-Users

1. Overview

- The Clients/End-users are the beneficiaries of the renewable energy plant(s). They are typically the asset owners or facility managers.
- Their experience on the platform is primarily Monitoring, Reporting, and Compliance Assurance.
- **Account Hierarchy:** Clients may range from single homeowners to large commercial entities. Therefore, the Client account must support a Portfolio Hierarchy:
 - **Portfolio View:** Aggregate data across all sites (e.g., "Total Savings across 10 Branches").
 - **Site View:** Granular data for a specific location.

2. Core Modules & Actions

a. Onboarding & Access Control

- i. **Invitation Flow:** Clients are invited to the platform via email by the Contractor upon project creation or commissioning.
- ii. **Permissions:** Clients have "Read-Only" access to technical project data but "Actionable" access to O&M scheduling and approvals.
- iii. **Multiple Contractors:** A single Client account must be able to view projects from different Contractors in one unified dashboard (avoiding the need for multiple logins).

b. Plant Dashboard (Site Level)

The "Control Room" for a specific installation.

Key features:

- i. **Technical Performance:** Infographics, charts and reports highlight:
 1. **Live Power Flow:** Animated visual showing Grid vs. Solar vs. Battery usage.

2. **System Health Status:** Simple "Traffic Light" system (Green = Optimal, Orange = Warning, Red = Fault).
 3. **Environmental Impact:** CO2 avoided (visualized in relatable terms, e.g., "Trees planted").
- ii. **Financial Performance (Priority):**
 1. **Real-time Savings:** "Today you saved R250.00."
 2. **ROI Tracker:** Progress bar showing payback period status (e.g., "Year 2 of 5 to break-even").
 - iii. **Optimization Insights (The "Upsell" Engine):**
 1. **Load Shifting suggestions:** "Your peak usage is at 19:00. Shift pumps to 12:00 to save R100/day."
 2. **Expansion opportunities:** "Your battery is full by 11:00 AM. Adding 5kWh storage could increase self-consumption by 15%."

c. Portfolio Dashboard (Multi-Site)

Only visible to clients with >1 active project.

Key features:

- i. **Map View:** Interactive map showing all sites and their current status (Green/Red).
- ii. **Aggregate Reporting:** Total Generation, Total Savings, and Consolidated Carbon Credits across all properties.
- iii. **Alert Feed:** High-level summary of critical issues across the fleet (e.g., "3 Sites are offline").

d. O&M Schedule & History

Clients will need access to view their upcoming O&M schedules, and past O&M history with access to reports.

Key features:

- a. **Service Calendar:** View past and upcoming maintenance visits.
- b. **Approvals & Sign-offs:**
 2. **Digital Sign-off:** Client can digitally "sign" a job card to confirm a technician was on-site and completed the job.

3. **Rating System:** Optional 1-5 star rating for the service provided (feeds into Contractor stats).

e. Handover Document Repository

Clients will have access to an organised repository of all the compliance certificates, warranties, data sheets, etc. All linked to the project milestones.

- a. **Document Repository:** Auto-folder for Compliance Certificates, Warranties, and Monthly Performance Reports.

f. Revenue Model

- i. **Targeted Industry Ads:** Ad placements must be context-aware.
 1. E.g., Farm with a Solar Plant: Gets advertising for pumps, farm equipment etc.
 2. E.g., Logistic company gets Ads for EV Trucks (Opportunity to self-promote Phoenix Energy).
- ii. **Marketplace Referrals:** Commission earned if a Client acts on an "Optimization Insight" (e.g., clicks "Request Quote for Battery Expansion").

Platform Administrators/Superusers

1. Overview

- a. Platform Administrators have high-level privileges to manage the ecosystem's integrity, liquidity, and compliance.
- b. Impersonation Mode (God Mode): For support and troubleshooting, Admins must be able to "Log in as" a Contractor, Client, or Service Provider to view the platform exactly as that user sees it (without knowing the user's password).

2. Core Modules & Actions

a. Super User Dashboard

- i. Ecosystem Health: Total Active Projects, Total Registered Users (by Type), Total Energy Deployed (TWh).
- ii. Financial Health: Total Volume in Escrow, Total Commission Earned (MTD/YTD).
- iii. Operational Queue: Count of Pending Vetting Requests, Pending Milestone Approvals, and Open Helpdesk Tickets.

b. User Onboarding Approval/Rejection

- i. KYC/KYB Queue: A dedicated interface to review uploaded company documents (CIPC, Tax Clearance, ID).
- ii.
- iii. Actions: Approve (activates account), Reject (with feedback reason), or Request More Info.
- iv.
- v. Role Management: Ability to upgrade/downgrade user tiers or ban users for bad behavior.

c. Milestone Submission Approval/Rejection

When contractors submit artefacts in their milestones for projects the back office team will need to review these documents and accept or reject their submissions providing feedback.

d. Milestone Template Configuration & Creation

Since Milestone templates will evolve and change inline with compliance, legislation and policy changes. It is key that Milestone templates are easily configurable from the backend with an easy UI.

- i. **Template Builder:** A drag-and-drop UI to define milestone workflows (e.g., "Solar C&I Workflow" vs. "Utility Wind Workflow").
- ii. **Rules Engine:** Configure the logic triggers:
 - 1. E.g., IF Project Size > 1MW THEN include "Grid Impact Study" Milestone.
- iii. **Versioning Control:**
 - 1. **Snapshot Logic:** When a Contractor starts a project, they inherit Version X of the template.
 - 2. **Updates:** If Admins update the template to Version Y, it must not break active projects on Version X. Only new projects get Version Y.
- iv. **Submission Review Portal:**
 - 1. Interface to view submitted artifacts (PDFs, Diagrams).
 - 2. Annotations: Admins can highlight sections of a PDF and add comments for rejection feedback.

e. Financial & Escrow Manager

- i. **Escrow Ledger:** View all funds currently held in suspense.
 - 1. Columns: Job Card ID, Payer, Payee, Amount, Date Deposited.
- ii. **Manual Overrides:**
 - 1. Force Release: If a Contractor goes AWOL, Admin can release funds to the Provider.
 - 2. Refund: If a Job is cancelled, Admin can return funds to the Contractor.
- iii. **Commission Log:** Report on platform fees earned per transaction.

f. Dispute Resolution Center

Connected to the Helpdesk but specific to Job Cards.

- i. **Dispute Dashboard:** View tickets where "Dispute" status is active.
- ii. **Evidence Locker:** View the Chat History and File Uploads between Contractor and Provider to arbitrate the decision.
- iii. **Adjudication:** Buttons to "Rule in favor of Contractor" (Refund) or "Rule in favor of Provider" (Release Payout).

g. Helpdesk

- i. **Ticket Management:** Kanban view of support queries (New, Open, Solved).
- ii. **Knowledge Base Management:** CMS to update FAQs and Help Articles to reduce ticket volume.

h. Benefits & Rewards Configuration

- i. **Tier Configuration:** Define the thresholds for Bronze, Silver, Gold, Platinum (e.g., "Gold = >2.5 TWh").
- ii. **Value Assignment:** Set the exchange rate for points (e.g., 1 Point = R1.00 or R0.50).

i. Notifications Engine

- i. **System Broadcasts:** Send "Push Notifications" or Banners to all users (e.g., "System Maintenance tonight at 22:00").
- ii. **Automated Triggers:** Edit the email copy for auto-emails (Welcome Email, Invoice Email, Reset Password Email).

j. DevOps Monitoring

- i. **System Health:** Database uptime, API latency, Error Rates.
- ii. **Audit Trail:** A "Super-Log" recording every Admin action (e.g., "Admin Sarah forced released R50,000 to Provider X on 12/05/2025") for security and fraud prevention.
